

HER  
1529

## Identification

<i>Genus</i> Cellulophaga	<i>Species</i> baltica	<i>Subspecies</i>	<i>Biovar</i>	<i>Serovar</i>
<i>Strain</i> 3		<i>Aliases</i>		

## Growth conditions

<i>Temp.</i> Room temp.	<i>Medium</i> Zobell agar MLB broth	<i>Aerobic/Anaerobic</i>	<i>Agitation</i> Agitation needed	<i>Other</i>
----------------------------	---	--------------------------	--------------------------------------	--------------

## Lysogeny

## Phage sensitivity

HER 529 (ST)

*Reference*

*Remark*

Takes three days to grow on Zobell agar pates, 16-20 hours to reach stationary phase in MLB, doubling time in MLB is 2-3 hours.

## History

*History*

**Isolated by**

Dr. Karin Holmfeldt, Department of Biology and  
Environmental Science, Linnaeus  
University, 391 82 Kalmar, Sweden

**Date**

February 2000

**Received from**

Prof. Matthew Sullivan, Center for Microbial Interface  
Biology, Ohio State University,  
484 W. 12th Ave. Columbus, OH 43210

**Date**

December 2016
