

HER number
750

Identification

Name MQM1		Morphotype Podophage	
Order	Family ?1	Genus	Species

Other designations
vB_AsaP_MQM1

Taxonomy

Class	Realm	Kingdom	
-------	-------	---------	--

Images

Electron Micrograph	Image description
Characteristics Plaques are slightly veiled with diameter of 1 mm. Requires CaCl ₂	Genomic sequence Activated

Propagation conditions

Bacterial hosts
[1666](#)

Reference
Hosseini N, Paquet VE, Marcoux PÉ, Alain CA, Paquet MF, Moineau S, Charette SJ. MQM1, a bacteriophage infecting strains of *Aeromonas salmonicida* subspecies *salmonicida* carrying Prophage 3. *Virus Res.* 2023 Sep;334:199165.

Remarks

Also infects HER1667
