Host HER 1335

HER
1335

Identification

Genre	*Espèce*	*Sous-espèce*	*Biovar*	*Sérovar*
Bordetella	*bronchiseptica*			

Souche	*Autres désignations*
AGI-L	

Conditions de croissance

Temp.	*Milieu*	*Aérobie/Anaérobie*	*Agitation*	*Autres*
37	TSA Blood agar			

Lysogénie

HER 336 (L-1)

Sensibilité phagique

Référence

Remarque
This strain was one of 4 isolated from a lethal outbreak of Bordetellosis in an African green monkey colony.

Needs humid atmosphere.

Spontaneous phage production.
